Subject: GenX testing of water supplies around Chemours Washington Works facility

Hi Dom,

As you may know, Chemours has been using the compound GenX since 2013 for the manufacture of Teflon at the Washington Works facility west of Parkersburg, WV. There have been concerns about GenX getting into the ground water and nearby drinking water supplies. On January 11, 2018, EPA requested Chemours to sample four public water supplies and ten private water supplies in West Virginia and Ohio. The water supplies were selected due to their close proximity to the facility and to the high PFOA concentrations identified in testing required under a SDWA Order. These wells would be the first to be impacted from GenX releases from the facility. Let me know if you have any questions. Thanks.

Roger
